## DIRECTIONS FOR USE:

### New Work, Wood (Inside and Outside):

Apply one coat of Robbiselec Wood Primer, allow to dry for 48 hours and then apply one coat of Robbiselec Undercoat. Finish with one or two coats of Robbiselec Enamel. Scuff Robbiselec lightly between coats with fine abrasive paper, and dust off before applying second coat. Allow at least overnight drying between coats.

(J. & N. Standard Undercoat may be used as a Primer with the addition of three (3) pints of Raw Linseed Oil to the gallon and as an Undercoat straight from the can.)

### Metal Surfaces:

**For New Inside and Outside Work:** Apply one coat of J. & N. Metalum Household Metal Primer, followed by one coat of Robbiselec Undercoat or Robbiselec Primer Surfacer. Lightly scuff between all coats with fine abrasive paper and dust off. Finish with one or two coats of Robbiselec Enamel. Allow at least overnight drying between coats.

### Previously Painted Surfaces (Wood or Metal):

**For Inside or Outside Work:** Ensure that the surface is free from dirt, grease and wax. If the surface is in good condition, one or two coats of Robbiselec Enamel (lightly scuffed between coats with fine abrasive paper) should give a perfectly satisfactory job. If an undercoat is necessary, use Robbiselec Undercoating. Allow at least overnight drying between coats. If the surface is flaking or is in otherwise bad condition, the old paint should be removed and proceed as for new work.
